

# Drug Dispensing Tool Requirements

1. Users should be required to log in to access the tool and their actions should be tracked to ensure accountability.
2. The tool should have a clear and intuitive easy to use interface.
3. It should allow pharmacies to manage their inventory of drugs and track to know if they are available or they are about to be depleted.
4. Pharmacies should be able to receive and manage orders of drugs from doctors and patients.
5. There should be high level of security to protect patients' information.
6. It should be very liable with minimum to zero errors.
7. When stock is low pharmacists should be alerted.
8. The tool should generate reports on the dispensing activity.
